

ecossedoors

Ecosse Doors manufacture a comprehensive range of made to measure timber doors and door sets:

Non Fire-rated, Fire-rated (FD30, FD60, FD90, FD120) and Secured by Design Pas 23 - Pas 24

Our modern manufacturing facilities and skilled workforce allow the production of consistently high quality doors including hand finishing with all doors fully inspected prior to wrapping and delivery.

Veneered Doors

Veneered doors are made using any commercially available veneer with a lacquer or stain finish that can be varied to give the doors that special look.

Veneers are available in quarter-cut and crown-cut styles and can be full door or with a variety of veneers and finishes inlaid using our specialised equipment. The standard doors are veneered over the edge lippings, which are fitted on all four sides in solid hardwood to match the veneers. Lacquering or staining is to customers' preferences using water based products. Advice and choice is available in selecting the veneers with particular emphasis on protection of our environment where veneers and hardwoods are only chosen from sustainable forests.

Laminated Doors

Practical and hard-wearing with a stress on durability, laminated doors are second to none in the commercial environment such as schools, hospitals and factories.

The laminates are produced by a number of manufacturers in many styles including plains and patterns with our equipment able to mix and match to customers' look and style.

Laminated doors are lipped after the laminates are applied, so are seen on the faces of the doors and can be made in contrasting or matching woods. All edges are finished by hand. The choice of laminates is extensive and many samples are held in our factory for ease of choice.

Primed Doors

Primed doors are ideal for clients who wish to apply their own choice of paint colour and can be supplied either internal or external grade.

The doors are manufactured in a similar fashion to veneered doors, lipped all round with sapele hardwood. Internal doors are covered with a special kraft veneer and external doors with WBP plywood, both of which, when primed, give a smooth base for the direct application of the chosen finishing paint. The primer would be chosen by the client and applied by us to match the requirements of the top coating.

Ecosse Doors supply stunning doors that meet the most demanding regulatory and aesthetic requirements.

Full Paint Finish Doors

The full paint grade doors are made exactly as the primed doors but are fully finished with paint in our paint shop. All paints are water based and spray applied. The colours, as chosen by the Client, can be gloss or matt with different colours on either side. Each door is hand finished.

Panelled Doors

An unlimited number of permutations of different types and styles of doors are available including mock Georgian, flush doors with applied mouldings or actual panelled doors made from a variety of timbers. Doors for all types of situations are available including matching in size and style where refurbishment is taking place.

Glass Apertures

Glass can be added to enhance every type of door described subject only to compliance with fire and security regulations. Fire doors with glass apertures present no difficulties and can be plain glass, wired, patterned or toughened as required. Openings can be made to almost any shape as the company has the machinery required to cut the openings and form the beads to match the desired shapes. Doors are glazed in our factory. Fully finished doors are decorated or lacquered after glazing to give an uninterrupted finished quality.

Ironmongery

We have accounts with several leading ironmongery suppliers and all types of ironmongery can be pre-installed in our doors or mortices cut.

Formed in 1997 Ecosse Doors Limited is established as a market leader in the manufacture of timber doors and door sets.

Efficient, quick, high quality production is achieved with modern facilities, state of the art equipment and a steady and reliable workforce.

All doors are constructed using solid door blanks, comprising 3 layer particle board or 3 layer core of mixed tropical hardwoods faced with 4mm plywood depending on the fire rating and security specification requirements of the client.

All doors are available as non fire-rated or fire-rated. Door sets come complete with frames and checks to meet the clients choice. Matching facings can be provided loose if required for self-fitting.

Ecosse Doors is certified under:

Pas 23 - Pas 24
